PROFESSIONAL SUMMARY

Data Science graduate student and Dean's Scholar with 2+ years of experience in data engineering, analytics, and machine learning. Specializing in building ML pipelines, time-series forecasting systems, and scalable data infrastructure across finance, environmental, and public-sector domains, with deployed production pipelines, applied research, and \$5M+ in quantified business impact.

SKILLS

Languages:	Python, SQL, R
ML & Analytics:	Predictive Modeling, Time-Series Forecasting, Statistical Modeling, A/B Testing, EDA, Regression
Libraries:	Pandas, NumPy, Scikit-learn, TensorFlow, CatBoost, XGBoost, Statsmodels, Flask
Visualization:	Power BI, Tableau, Plotly, Streamlit
Databases & Tools:	Snowflake, MySQL, MongoDB, Airflow, Informatica, Git, JIRA, Confluence
Certifications:	SnowPro Core Certification, Google Data Analytics Professional Certificate

EDUCATION

M.S. in Data Science University of Texas at Arlington GPA: 4.0 / 4.0	Aug 2024 - May 2026 USA
B.Tech in Computer Science & Engineering Birla Institute of Applied Sciences	Aug 2018 - Jun 2022 India

EXPERIENCE

Data Engineer Genpact (PIMCO) - Spearheaded migration of 5TB+ datasets from Oracle and MySQL to Snowflake, contributing to \$5M+ annual infrastructure cost savings. - Designed and executed 100+ ETL pipelines using SQL, Perl, Informatica, Airflow, and Autosys with 100% on-time delivery. - Boosted query performance by 30% through data model redesign and pipeline optimization, reducing latency for downstream teams. - Ensured integrity of 5TB+ financial datasets powering PIMCO investment analytics by validating and reconciling records. - Collaborated with data architects and business stakeholders to document data lineage, schema definitions, and pipeline dependencies, improving team onboarding and audit readiness.	May 2023 - Jul 2024
Business Analyst Genpact (PIMCO) - Produced 50+ analytical reports used directly in executive leadership reviews, influencing strategic planning decisions. - Bridged gap between quant and engineering teams by converting 150+ business requirements into structured JIRA stories, reducing rework cycles. - Conducted gap analysis between existing workflows and business objectives, identifying process inefficiencies and recommending data-driven solutions adopted across 2 delivery teams. - Partnered with 3+ business units to define KPIs and metrics frameworks, translating operational data into structured reporting templates used across quarterly reviews.	Sep 2022 - Apr 2023
Software Engineer Intern Enquero - Completed 50+ hours of Teradata and cloud data platform training; conducted EDA using Pandas, Matplotlib and Seaborn. - Built internal web-based reporting interfaces using HTML, CSS, and JavaScript, enabling non-technical stakeholders to interact with EDA outputs.	Feb 2022 - Aug 2022

PROJECTS

Predictive Analytics for Academic Incident Management Pandas, Statsmodels, Streamlit, Plotly - Engineered an end-to-end ITSM analytics pipeline on ServiceNow incident logs; applied Holt-Winters Exponential Smoothing to forecast workload spikes and recurring bottlenecks. - Performed temporal aggregation, anomaly filtering, and seasonality decomposition to surface hidden patterns across IT service cycles. - Developed interactive Streamlit dashboard identifying service hotspots and infrastructure strain, enabling data-driven staffing decisions and targeted hardware refresh planning in high-strain campus zones.	GitHub Demo
SmogCast – Air Quality Classification & Forecasting CatBoost, LSTM, Transformer, Streamlit - Engineered lag, rolling-window, and seasonal features from 700K+ hourly environmental records for multivariate time-series modeling. - Achieved 93% multiclass AQI classification accuracy with CatBoost and 9-12 RMSE using LSTM and Transformer architectures. - Deployed Streamlit dashboard for real-time PM2.5/PM10 monitoring and 7-day ahead air quality forecasting.	GitHub Demo
Pokémon Data Showdown Python, Scikit-learn, Streamlit - Placed 2nd out of 20 teams in the competition, recognized for model creativity and deployment quality. - Applied unsupervised ML (clustering) to Pokémon stat data to identify role-based archetypes and build optimized, budget-constrained team compositions. - Applied feature scaling, dimensionality reduction, and silhouette scoring to identify the optimal cluster count for valid archetypes. - Deployed an interactive Streamlit app enabling exploratory stat analysis and team-building recommendations.	GitHub Demo
SpaceX Falcon 9 Launch Success Prediction Scikit-learn, XGBoost, Python Benchmarked Logistic Regression, RF, and XGBoost achieving 82.6% accuracy, 0.88 F1, and 0.93 ROC-AUC; analyzed payload mass, orbit type, and launch site feature importance.	GitHub
Tech Layoff Trends – Workforce Analytics Python, Pandas, EDA Analyzed 770K+ global job cuts uncovering temporal, sector, and regional patterns; identified 2023 as peak year (~264K) and January 2023 as peak month (~89.7K) via time-series EDA.	GitHub

ACHIEVEMENTS

Student Employee of the Year, Award of Excellence, University of Texas at Arlington	Mar 2026
Graduate Research Assistantship, Merit-based 1-year funding award, UTA	Aug 2025
Dean's Scholar, DOE Dean's Scholarship Recipient, UTA (Fall-2024)	Sep 2024
